

thank the chairman of the Appropriations Committee for his work and the staff on the hard work they have done on this bill. Based on the limited allocation that they have received, I think they did a pretty good job.

Mr. Chairman, I want to speak specifically to a provision in the bill that I support, and I want to thank Mr. DICKS for putting the provision in the bill, and I want to thank the chairman for allowing it to stay in the bill.

Basically, the provision I would like to speak to is the sense of Congress in this bill that deals with the fact that this Congress should pay attention to, work with, and try to understand the increasing amount of carbon dioxide into the atmosphere, and what does that mean.

Carbon dioxide in the atmosphere, while it represents a tiny fraction of 1 percent of the whole atmosphere, is the chief gas that determines the heat balance; it determines the climate. And there is a scientific consensus that within the last 100 years, especially within the last 50 years, human activity burning fossil fuel has put huge amounts of carbon dioxide in the atmosphere, thus debilitating or changing that heat balance that we have known for a long time.

An example: 10,000 years ago, at the end of the Ice Age, it is calculated through analysis that there was 180 parts per million of carbon dioxide in the atmosphere. It took 10,000 years for that to go up 100 points, 10,000 years. Now, in the last 100, but especially in the last 50 years, it has risen 100 points. So what the natural environment did in 10,000 years, human activity burning fossil fuel has done in less than 100 years.

Now, what does that mean? Does that mean whoever talked about global warming is crying Chicken Little, the sky is falling; don't worry about it, nothing will happen? Or does it mean we need to pursue knowledge?

What it means is, that increase in carbon dioxide in less than 100 years that took the natural process 10,000 years to produce, this U.S. Congress, this government should pay attention to that issue. And the sense of Congress contained in this legislation should remain in this legislation.

I yield to the gentleman from Washington.

Mr. DICKS. I want to commend the gentleman on his statement. This is not an issue that should be partisan in any way. We have had six former EPA administrators in both parties say that this is the issue of our time. A former Member, former Vice President of the United States, Al Gore, has made a national issue out of this. I would like the gentleman to repeat what he said about Greenland. I thought that was very dramatic. I would appreciate it. I think we have more Members now. If you would repeat that, I think that would be important to the debate.

Mr. GILCHREST. Greenland is an interesting place because you can go

back several hundred years. People were tracking the increasing or decreasing glacier ice cap. So there is a very accurate record. We saw some 20 years ago that the ice cap really significantly began to melt and about 20 cubic miles of ice was flowing into the North Atlantic. Today, that has increased to 53 cubic miles of ice cap on Greenland flowing in the form of water, melted water, into the North Atlantic. The rate we are going, we are going to lose the Greenland ice cap. When we do lose the Greenland ice cap, sea levels will rise 23 feet around the globe.

Mr. DICKS. I want that to be repeated: 23 feet. I want my colleagues from Florida who are sitting here on the floor to think about what that would mean in Florida, what that would mean in the coast of California, the coast of Washington.

Mr. GILCHREST. New York City. Boston.

Mr. DICKS. This could be a catastrophic event. Yet we are not even willing to have a sense of the Congress resolution that says that human activity may be part of the problem. I mean, we have got to wake up on this. It is time to wake up.

The former Vice President has been out making speeches all over the country. There was a movie which opened last night on this issue. This could be the issue of all time. If we don't get busy and start realizing we have got a role and a responsibility to play here, it may be too late. For every one of us who either has grandchildren, or may have grandchildren, we have got to think about this. What legacy are we leaving if we don't face up to this reality?

The authorizers simply haven't done it. That is why the chairman, I thought, was very kind to accept this amendment. But now I understand they are going to knock it out on a point of order. This is like putting your head in the sand. I want to thank the gentleman from Maryland, who is one of the more enlightened Members of this body, for all the facts that he has brought to this debate today. I hope somehow working together we can resurrect this at some future point. I would hope even that maybe the chairman of the Commerce Committee might rethink his opposition to this sense of the Congress resolution.

The CHAIRMAN. The Committee will rise informally.

The Speaker pro tempore (Mr. KUHLMANN of New York) assumed the chair.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Ms. Wanda Evans, one of his secretaries.

The SPEAKER pro tempore. The Committee will resume its sitting.

DEPARTMENT OF THE INTERIOR, ENVIRONMENT, AND RELATED AGENCIES APPROPRIATIONS ACT, 2007

The Committee resumed its sitting.

Mr. TAYLOR of North Carolina. Mr. Chairman, I yield 2 minutes to the gentleman from Florida (Mr. YOUNG).

Mr. YOUNG of Florida. Mr. Chairman, 25 years ago, I stood at this very microphone at this very desk and offered the amendment that initiated the first Outer Continental Shelf moratorium dealing with drilling for oil and gas. Over the years, that 25-year period, working with industry, working with the Federal Government, working with the State government and working with the Congress, we have evolved a program that has worked. During that time we have opened up some of the areas for exploration and for drilling. During that time we have also bought back some of the leases that were environmentally threatening.

This amendment that was added in the appropriations committee, the so-called Peterson amendment, happened without any hearings on the part of the subcommittee, no hearings on the part of the appropriations committee, and now we are trying to do something about that, at least give us time to work with our own House committee that has been working diligently for the last 6 to 8 months on trying to come up with a proper type of moratorium.

We should not allow this language, the so-called Peterson amendment, to stay in this bill today. We should continue the work with the House committee that is already working on it and try to maintain the environmental protection that is so important to so many areas of the waters in and around the United States of America.

As I said, this moratorium has been here for 25 years. It has evolved during that time. It has worked extremely well. I believe that we should be very careful in changes that we might make and we shouldn't make them wholesale without definite thought and consideration.

□ 1300

I yield to the gentleman from Washington.

Mr. DICKS. I want to commend the gentleman from Florida who has been a leader on this issue. We all know the sincerity of Congressman PETERSON on this issue. It is a very important issue. But I want to say, I agree with you. I think to do it in an appropriations bill, and especially when it is part of the President's budget and the plan, to me this isn't the right way to proceed. I realize that there is some history here but it is 25 years since this was done and I think this has worked very effectively. Let's try to work together to maintain this provision.

Mr. YOUNG of Florida. I thank the gentleman for his thoughts.

Mr. HINCHEY. Mr. Chairman, I yield 2 minutes to the gentleman from Texas (Mr. GENE GREEN).
